

CARING FOR YOUR LETTERING & GRAPHICS

- *Do not wash area for at least 24 hours after vinyl application.
- *Avoid prolonged exposure to harsh chemicals; gasoline, motor oil, antifreeze, etc.
- *Protective coatings are not necessary. Petroleum or silicone distillates can damage the decal surface after repeated exposure. Avoid protectants containing solvents which may cause the decal to lift.
- *Follow proper waxing procedures stated by wax manufacturers.
- *Wax that has dried along the edge of the graphic can be removed by first softening it with rubbing alcohol and cotton swabs, then rinse.
- *When cleaning, use a non-abrasive solution suitable for high quality painted finishes, free of strong solvents and alcohol.
- *Keep pressure washers at least 18" away from surface and edges of the decals as this could lift the edge of the graphic.

Froggy's Signs, Inc. accepts no responsibility for damage of any type. Warranty is only covered on product failure and will be determined solely by Froggy's Signs, Inc.
